DETAILED ACTION

1. Claims 2-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 6.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki in U.S. Patent No. 6,117,752 in view of Guenther et al. in U.S. Patent No. 6,072,631. Suzuki discloses using a laser beam , a beam homogenizer and a mask to anneal a semiconductor. Suzuki does not disclose the average intensity varying 11.2 %. Guenther et al. teaches in column 16, lines 25-30 using a diffractive element designed under the convolution technique and shown in figure 8(E) a relatively flat top portion with a roughly constant intensity of 0.6. It would have been obvious to adapt Suzuki in view of Guenther et al. to provide this to increase the uniformity of the beam and therefore increase the uniformity of the laser annealing.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Dubroeuq et al. in U.S. Patent No. 4,370,026 discloses in figure

Art Unit: 1725

5-c with a maximum intensity deviation of 3 %. Kurtz et al. in U.S. Patent No. 5,923,475 in figure 5 has a chart of interest. Fork in U.S. Patent No. 5,699,191 has a narrow pitch beam homogenizer.
